

Flutter To-Do App – Report

1 - Project Overview

This project is a To-Do List Mobile Application developed using Flutter (Material Design framework).

The application allows users to:

- View a list of tasks
- Add new tasks
- Mark tasks as completed
- Delete tasks

2 - Fonts Used in the Project

The application uses Flutter's default Material font:

- Font Weights Used:
 - `FontWeight.w500` → Title text ("ALL ToDos")
 - Normal weight → Task items
- Font Sizes:
 - 30 → Screen Title
 - 16 → Task text
 - 40 → Add button "+"

3 - Color Palette Used in the Project

The app uses a soft, minimal color scheme defined in `colors.dart`.

Color Name	Hex Code	Usage
Background Color	#EEEEFF5	Main app background
Blue (Primary Action)	#5F52EE	Add button, checkbox
Red (Delete Action)	#DA4040	Delete button
Black (Text)	#3A3A3A	Main text color
Grey	#717171	Secondary text
White	#FFFFFF	Cards & input fields

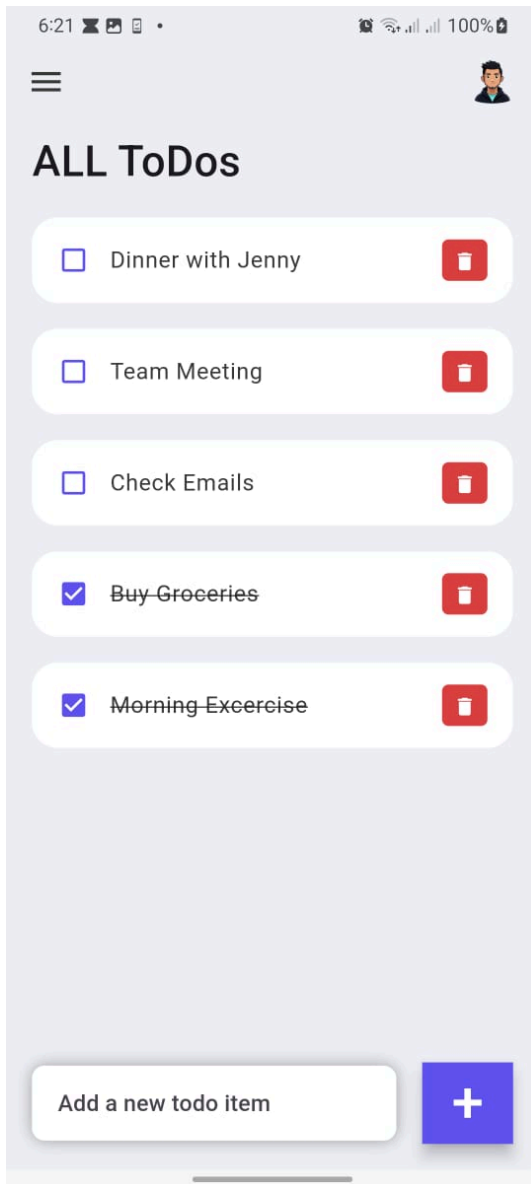

4 - Screenshots

4.1 – Main Screen (Initial State)

Description:

- Displays preloaded tasks.
- Completed tasks are shown with:
 - Checkbox icon
 - Strikethrough text

- AppBar includes:
 - Menu icon
 - Circular avatar image

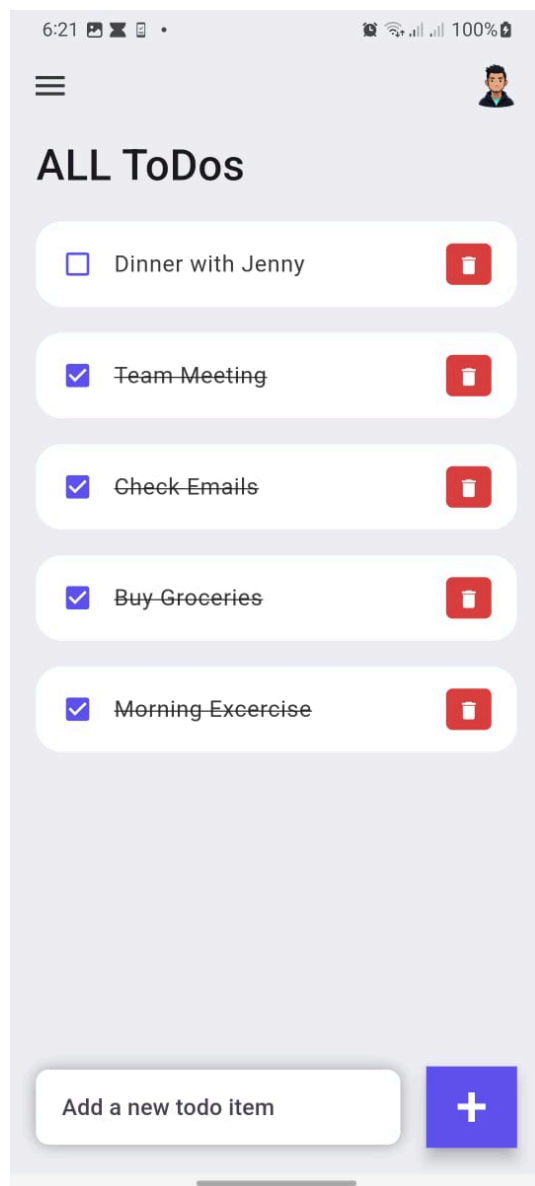

4.2 - Marking Task as Completed

Action:

User taps on a task item.

Result:

- Checkbox changes to filled.
- Text becomes strikethrough.
- State updates dynamically using `setState()`.

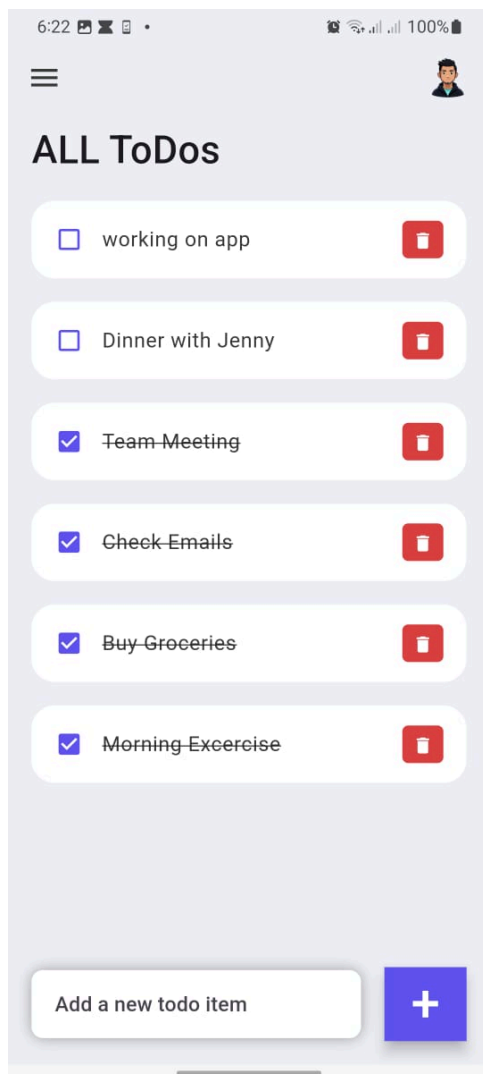

4.3 - Adding a New Task

Action:

1. User types text in the input field.
2. Presses the blue "+" button.

Result:

- New task appears at the top of the list.
- Text field clears automatically.

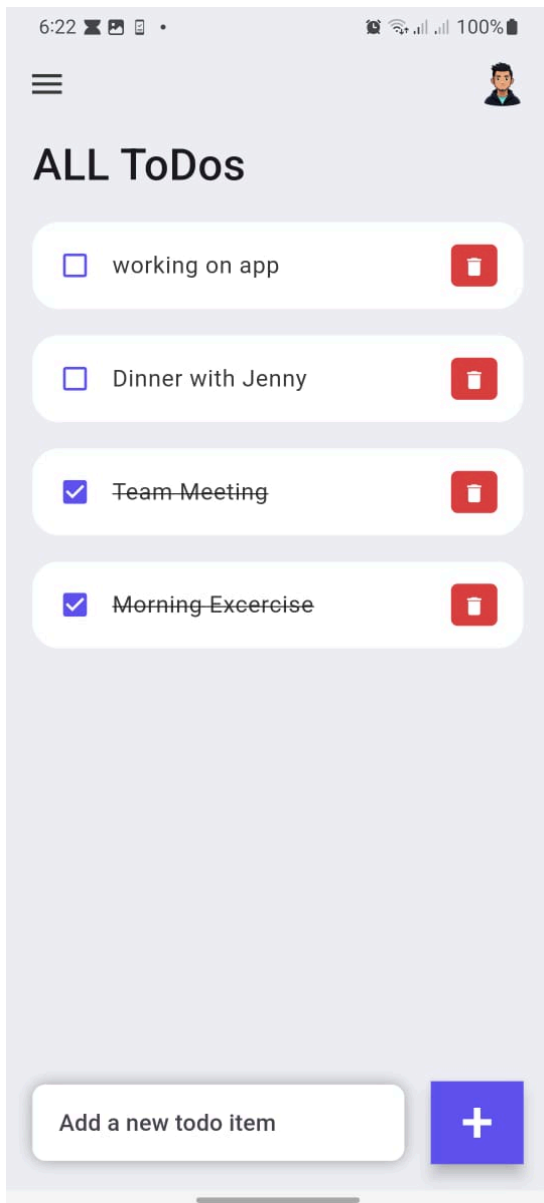

4.4 - Deleting a Task

Action:

User taps the red delete icon.

Result:

- Task is removed from the list.
- UI updates instantly.

5 - UI Structure Explanation

♦ **Main Structure**

The app uses:

- `MaterialApp`
- `Scaffold`
- `AppBar`
- `ListView`
- `ListTile`
- `TextField`
- `ElevatedButton`
- `Stack` (to position bottom input area)

♦ **Layout Strategy**

- `Stack` used to fix the input bar at the bottom.
- `Expanded` + `ListView` for scrollable tasks.
- `Container` + `BoxDecoration` for card-style items.

6 - State Management

The app uses:

- `StatefulWidget`
- `setState()` for:

- Adding tasks
- Deleting tasks
- Updating task completion status
